

Dear Sirs,I am a recent subscriber to satellite radio. It is a great thing to own. I am also a big believer in the United States Constitution and believe that it is being trampled on by too many people these days. It is my understanding that XM Satellite radio wants to add traffic and weather to their line up of stations offered, and that the National Association of Broadcasters wants to stop them from doing it. Please respect XM Satellite Radios rights to air such broadcast, and my rights as a paid subscriber to listen to such broadcast. I urge you to become a subscriber to satellite radio and experience the variety and quality that doesn't exist anywhere else. Thank you so much for your time.
